SUMMARY

Aspiring Backend Developer with strong hands-on experience in Java, Spring Boot, RESTful APIs, and scalable backend systems. Skilled in database design, SQL optimization, ETL pipelines, and cloud-based data processing using Google Cloud Platform and BigQuery. Passionate about building production-grade applications while leveraging strong database and data engineering fundamentals.

EDUCATION

Master of Computer Applications (MCA) Currently Pursuing Bharati Vidyapeeth Institute of Management and Technology, Navi Mumbai	2025 – 2027
Bachelor of Science in Information Technology (BSc IT) CGPA: 8.75 Kishinchand Chellaram College, Mumbai	2022 – 2025
Completed XIIth from S.I.W.S College, Mumbai	2021 – 2022
Completed Xth from Maharashtra State board	2019 – 2020

SKILLS

Languages: Java (Primary), Python, SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, JWT Authentication

Databases: MySQL, PostgreSQL, Oracle SQL, PL/SQL, MongoDB, Google BigQuery

Query Optimization: Window Functions, CTEs, Complex Joins, Indexing Strategies.

Data Engineering: ETL Pipelines, Data Warehousing, Data Modeling (3NF, Star Schema)

Tools & DevOps: Docker, Git, GitHub, Swagger/OpenAPI, Power BI

Cloud: Google Cloud Platform, AWS (Basics)

PROJECTS

PayFlow – Banking REST API

Technologies: Spring Boot, Spring Security, JWT, Docker, MySQL

- Built a production-grade RESTful banking API using Spring Boot.
- Developed 20+ endpoints for account management and fund transfers.
- Implemented JWT authentication and RBAC using Spring Security.
- Reduced average query execution time by ~40%.
- Containerized the application using Docker and Docker Compose.
- Implemented Spring functionalities and features.
- Implemented entire end-to-end to work-flow of Bank Backend-Operations.
- Handled concurrent transaction scenarios and ensured data consistency during fund transfers.
- Managed source code and version control using Git and GitHub.
- Implemented all the features of Spring Boot Framework.
- Structured the application using layered architecture (Controller → Service → Repository) for maintainability and scalability.
- Wrote unit and integration tests (JUnit/Mockito) to validate business logic and API behavior.

[GitHub: github.com/ArnavTambe06/PayFlow](https://github.com/ArnavTambe06/PayFlow)

TweetSense – Real-time Twitter ETL Pipeline & Sentiment Analysis

Technologies: GCP, BigQuery, Power BI, Python

- Built an end-to-end ETL pipeline on GCP.
- Processed and validated Twitter data into BigQuery.
- Optimized BigQuery costs by 60% using partitioning and clustering.
- Built Power BI dashboards for real-time sentiment insights.

[GitHub: github.com/ArnavTambe06/TweetSense](https://github.com/ArnavTambe06/TweetSense)

BankCoreDB – Core Banking System

Technologies: Oracle SQL, PL/SQL, MySQL

- Designed normalized relational schema (3NF).
- Developed 10+ PL/SQL procedures and functions.
- Implemented indexing strategies and audit triggers.

WORKSHOPS & SEMINAR

Java Seminar: Spring Boot Fundamentals, Features, Real world Integration

AI & ML Seminar: Fundamentals, Predictive analytics, Neural networks

RPA Workshop: Automation tools, workflow automation

CERTIFICATIONS

- **Java – HackerRank Certification (March 2026)** — Demonstrated proficiency in Java programming, problem-solving, object-oriented programming, and core programming concepts.
- **SQL – HackerRank Certification (April 2026)** — Validated skills in SQL querying, database operations, joins, aggregations, and relational data management.

ACHIEVEMENTS

- **UI Hackathon — HasthSetu**
Platform for rural areas to connect and get consultation from doctors digitally and check for nearby medical stores.
- Built real word project to analyze Tweets and Sentiments of people around globe.
